

Early Preventive Orthodontics

Early preventive orthodontic treatments are centered on correcting abnormalities in jaw growth and bite problems. Through early intervention, it's easy to fix their irregularities and eliminate the chances of preventable tooth extractions in the future.

- » Reduce the risk for crowded or erupting teeth
- » Facilitate proper jaw growth to create facial symmetry
- » Prevent the front teeth from protruding
- » Eliminate the need for teeth removal
- » Prevent malocclusions

Avoid future orthodontic problems that severely impact the health, function and appearance of your smile. When you need early preventive, non-extraction care that's focused on ensuring long-lasting good oral health, look to Matthew Milestone, DMD.

Your child could benefit from early orthodontic treatment from Dr. Milestone. To schedule an appointment, please call 973.325.1777 (West Orange) and 201.845.8411 (Paramus) or use our online Request an Appointment form.
